Master CPSE

Cyber-Physical Systems Engineering

Mention “Industrial Engineering”

Responsible for the Master CPSE

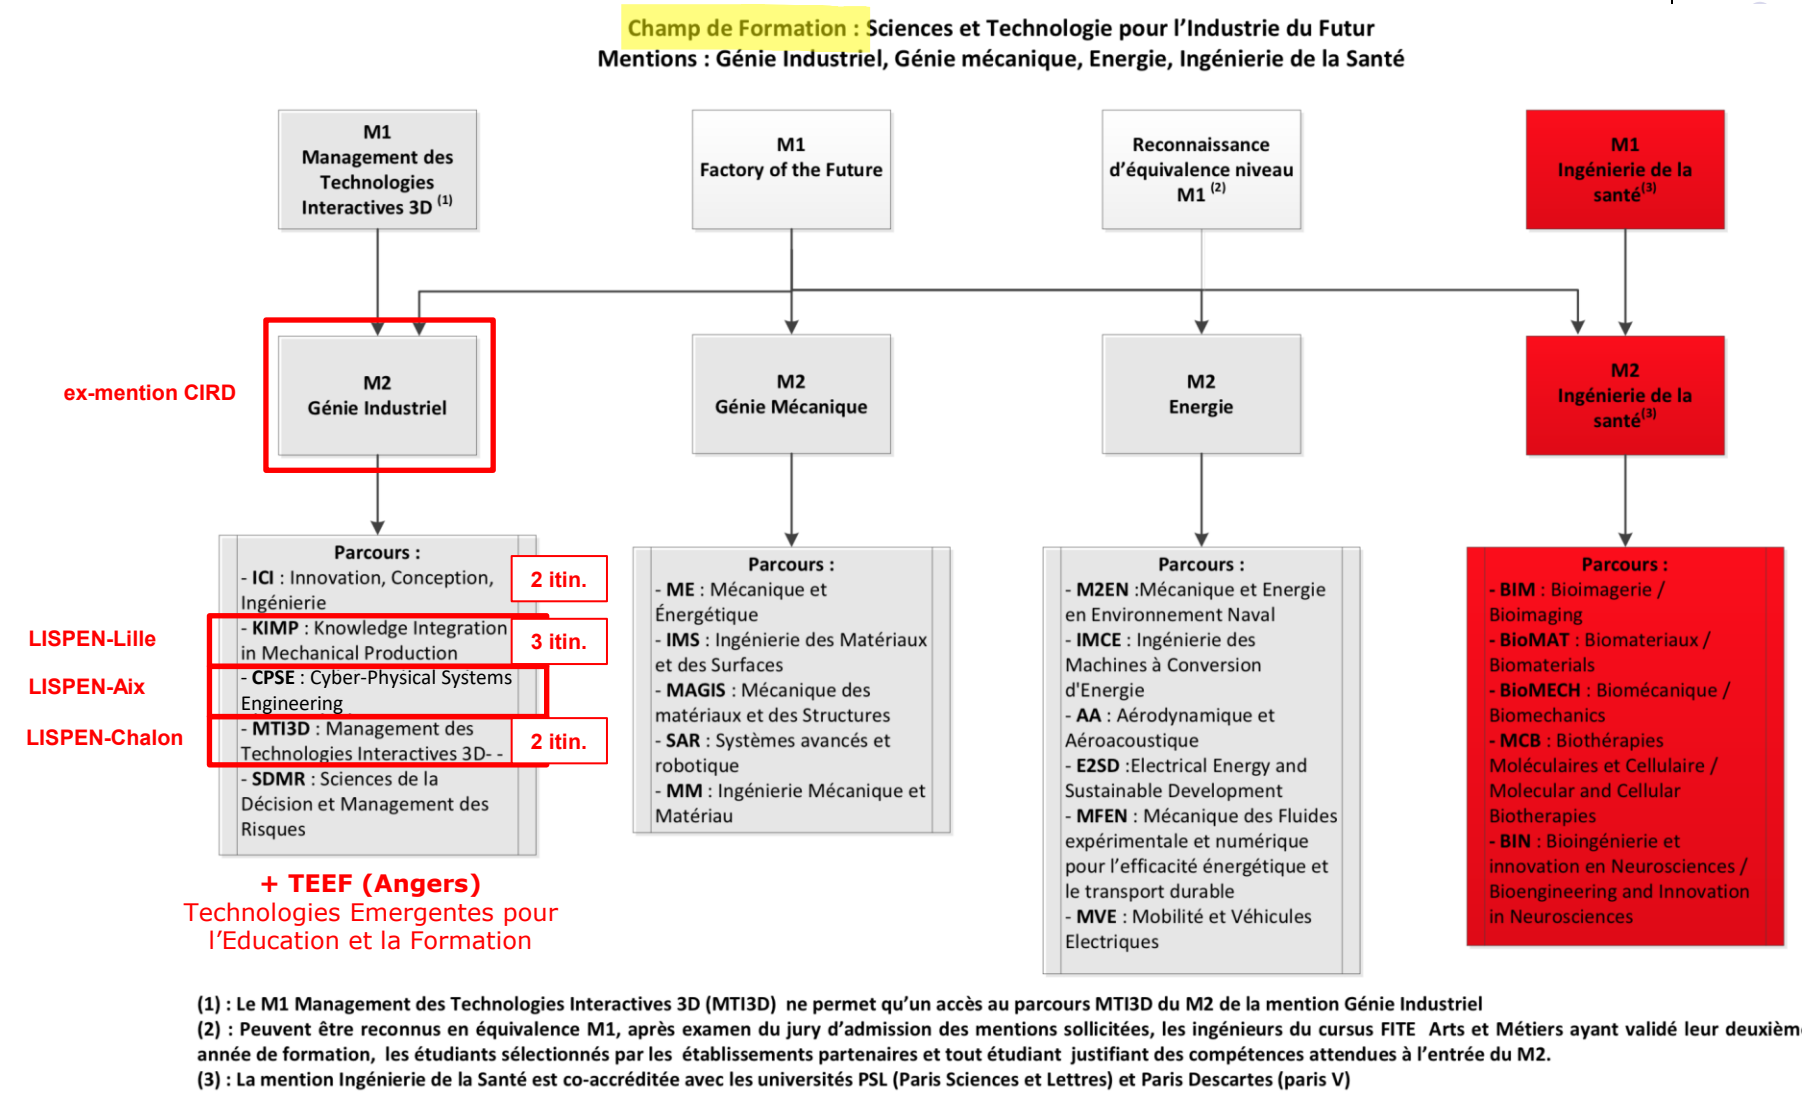

Esma YAHIA

Esma.Yahia@ensam.eu

Arts et Métiers – Campus of Aix-en-Provence

Master CPSE

Evolution of the mentions at Arts et Métiers

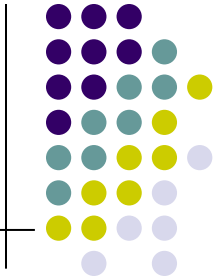

(1) : Le M1 Management des Technologies Interactives 3D (MTI3D) ne permet qu'un accès au parcours MTI3D du M2 de la mention Génie Industriel

(2) : Peuvent être reconnus en équivalence M1, après examen du jury d'admission des mentions sollicitées, les ingénieurs du cursus FITE Arts et Métiers ayant validé leur deuxièm année de formation, les étudiants sélectionnés par les établissements partenaires et tout étudiant justifiant des compétences attendues à l'entrée du M2.

(3) : La mention Ingénierie de la Santé est co-accréditée avec les universités PSL (Paris Sciences et Lettres) et Paris Descartes (paris V)

Master CPSE

Overall objectives and learning outcomes

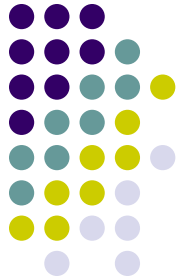

- **OBJECTIVES** :
  - To explore the **concepts, methods, models and tools** used to design, simulate, manufacture and control **Cyber-Physical Systems** (CPS) in the scope of **Industry 4.0**
  - To train future engineers and researchers **to evolve in complex multi-disciplinary industrial environments embedding CPS** as well as other mainstream Industry 4.0 technologies and processes

- **LEARNING OUTCOMES** :
  - Deep theoretical knowledge on the mainstream **concepts, methods, models and tools involved in CPS engineering and Industry 4.0** technologies and processes
  - Extended **practical skills** for the definition of **multi-disciplinary technical solutions for CPS engineering**
  - Deep understanding of the **overall value chain**, the **strategic and supply chain management** and the associated concepts with a particular focus on Industry 4.0 issues
  - Structured **research methodology** to be used as a template to address a wide range of research challenges related to Industry 4.0
  - **Transversal adaptation, integration, analysis, critical thinking, self-learning, communication, valorization and organizational skills** gained when confronting to both academic and industrial multi-disciplinary projects
  - **International exposure** through the courses taught in English and exchanges with other foreign students.

Master CPSE

Overview of the overall program

Semester 1 (Sept. – Jan.)

Professional modules MPi (4x12h)

Language MLi (24h)

MS1 (24h)

MS2 (24h)

MS3 (24h)

MS4 (24h)

MS5 (24h)

MS6 (24h)

LONG PROJECT – PJR in relation with MSi (128h)

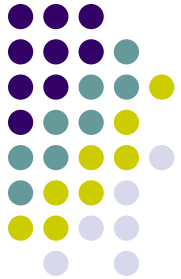

Search of the INTERNSHIP

Semester 2 (Feb. – Sept.)

INTERNSHIP – Part 2
(start February 1st – final defences in September)

Master CPSE

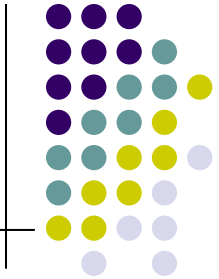

List of modules

- **Professional modules (12h/MPi)**
  - MP1 : Research methodology (JP. Pernot)
  - MP2 : Artificial Intelligence and data analytics (A. Polette)
  - MP3 : Industry 4.0 : concept, survey and future trends (L. Roucoules)
  - MP4 : Digital factory and supply chain (F. Rosin)
- **Scientific modules (24h/MSi)**
  - MS1 : Digital Mock-Up for CPS modeling and advanced engineering (P. Véron)
  - MS2 : Reverse Engineering and rapid prototyping of CPS (JP. Pernot)
  - MS3 : Continuity for CPS engineering in a heterogeneous context (L. Roucoules)
  - MS4 : Supervision of CPS during the engineering and exploitation phases (E. Yahia)
  - MS5 : Advanced robotics (A. Olabi)
  - MS6 : Mechatronics, advanced control, identification and fault-detection for CPS (G. Moraru)
- **Long research project (128h of PJR)**
- **Language module (24h/MLi) – only one module / student**
  - ML1 : Advanced technical English for non-native English speakers (C. White)

Master CPSE

Evaluation and ECTS credits (1/2)

- **General rules**
  - Each module can be evaluated by means of practical works, projects, reports, oral presentations, exams, etc. (to be made explicit)
  - For scientific modules (MSi) :
    - The final mark* of each scientific module must be ≥ 10 (**no averaging**)
  - For professional and language modules (MPi and MLi) :
    - The final mark* of each professional/language module must be ≥ 10 **(no averaging**)
  - For long research project (PJR) :
    - The final mark* of the PJR must be ≥ 10
  - For master thesis :
    - The final mark* of the master thesis must be ≥ 10
  - If retake exams are needed, **the best mark between the first and second chances is considered**.

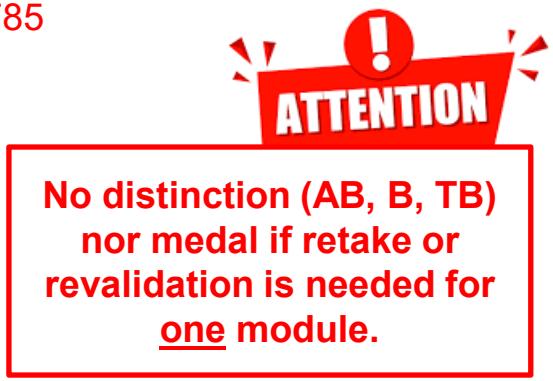

- **ECTS credits**
  - 1st semester (from September to January) – 30 ECTS
    - MPi/MLi/PJR : 2 ECTS each
    - MSi : 3 ECTS each
  - 2nd semester (from February to September) – 30 ECTS
    - Master thesis project : 30 ECTS

*details on how the final marks are computed are provided in the next slides

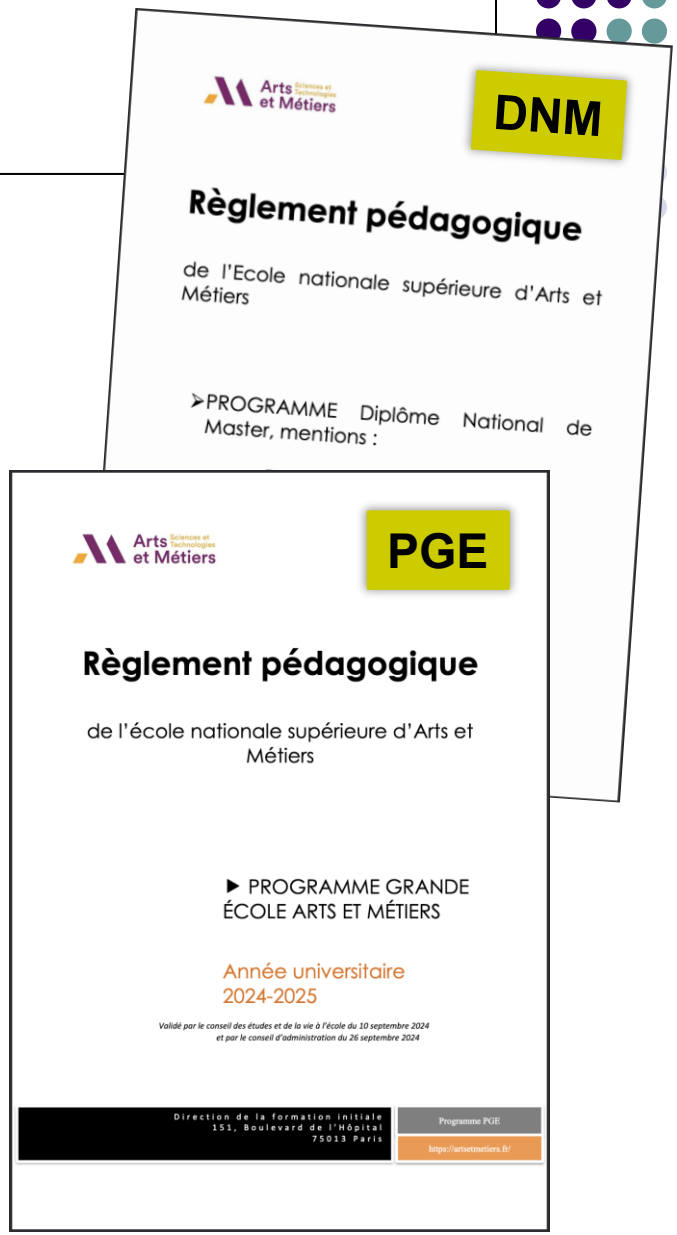

Master CPSE

Evaluation and ECTS credits (2/2)

- **For students from Art et Métiers (PGE)**
  - You also have to comply with the rules from CTI (Commission des Titres d'Ingénieurs) to get your second degree
  - International mobility :
    - 16 weeks (during your S8, during your internship, or as an additional semester)
  - Industrial internship :
    - From 10 to 13 weeks (can be done during the Master thesis internship)
  - TOEIC :
    - Level 785

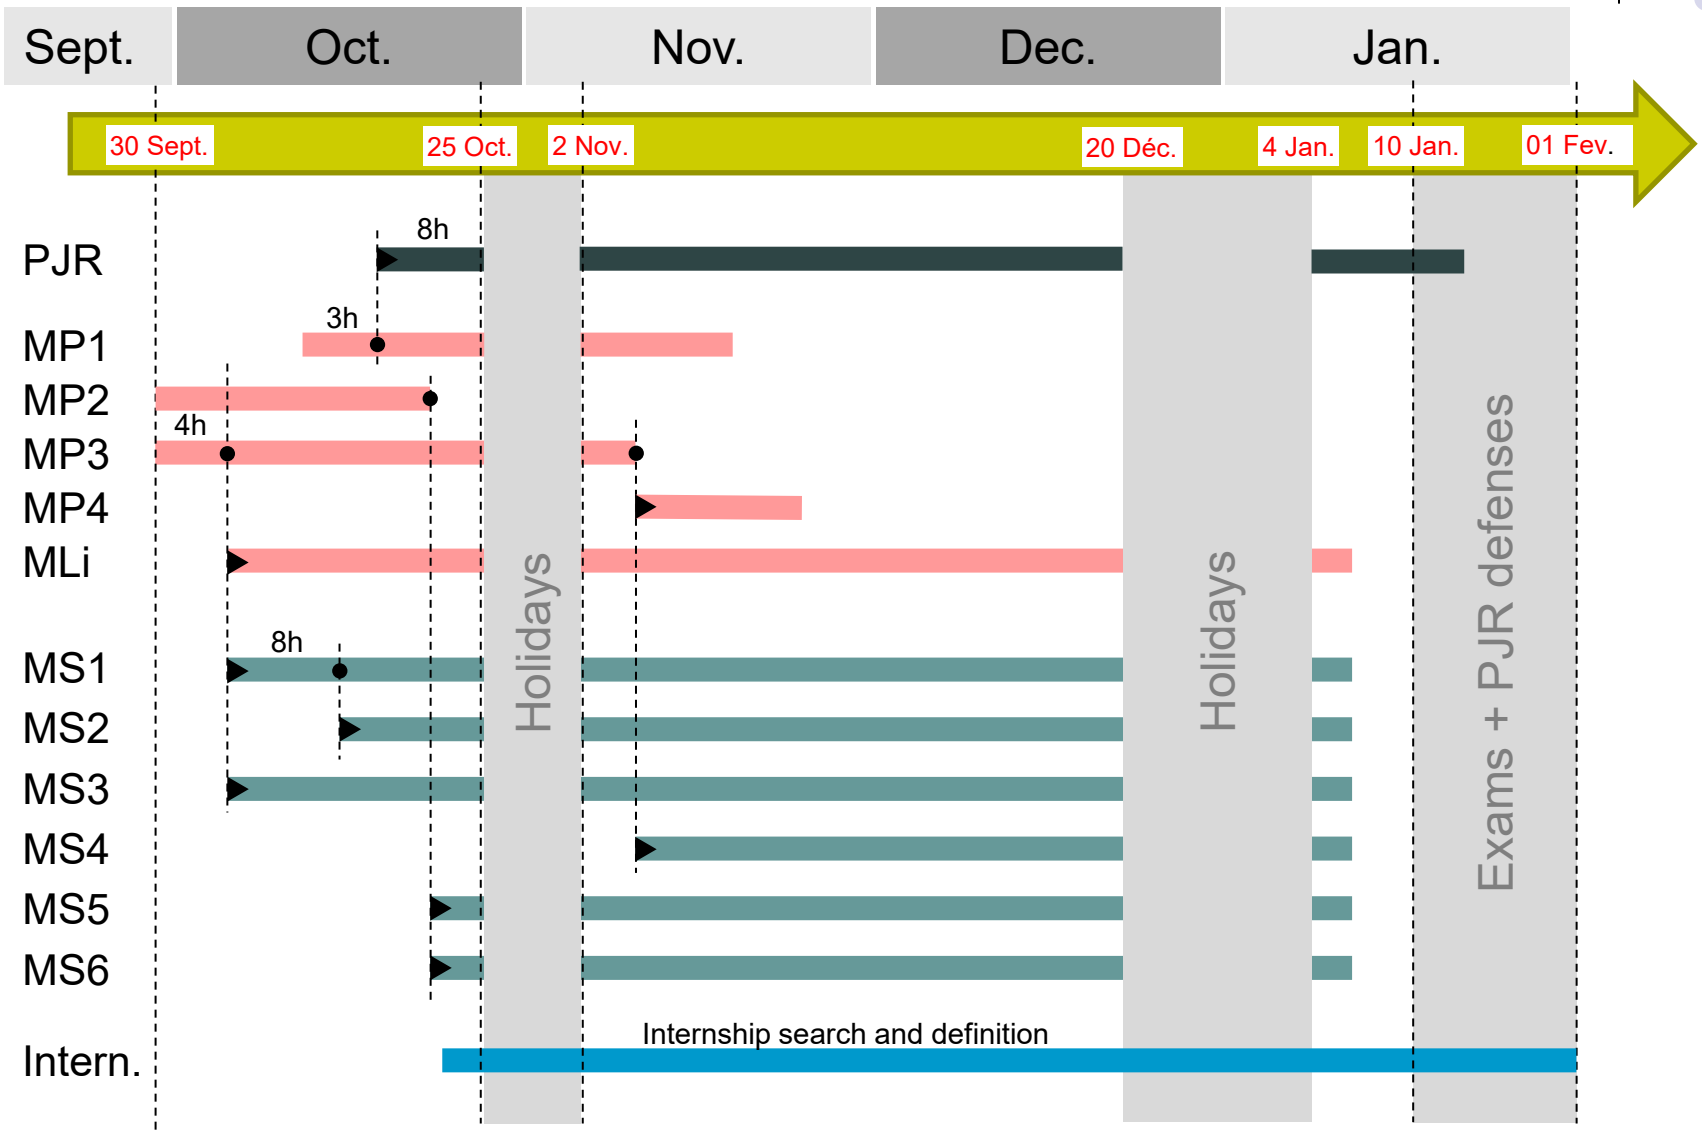

No distinction (AB, B, TB) nor medal if retake or revalidation is needed for <u>one</u> module.

*available (in French) on etre.ensam.eu

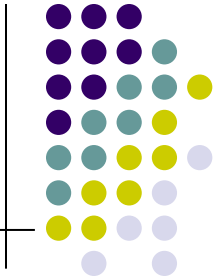

Master CPSE

Scheduling

Professional modules

MP1 – Research methodology

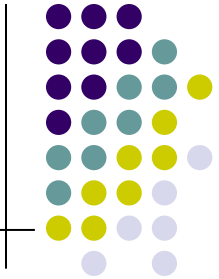

- **OBJECTIVES** :
  - To understand the **core and transversal requirements** to conduct a research project and set up a research methodology
  - To learn **how to do a state-of-the-art** and **validate a scientific contribution**

- **STRUCTURE** :
  - **P1.1 : Core requirements**
    - Typologies of research projects and methodologies — 2h (JPP)
    - Steps in conducting a research project — 1h (JPP)
    - Conflict of interest, research ethics, confidentiality, IP — 1h (JPP)
    - State-of-the-art, analysis criteria and critical thinking — 4h (JPP)
    - Research project and validation methods — 2h+2h (JPP/LR)
  - **P1.2 : Transversal requirements**
    - Databases access and use (patents, publications) — 2h (CW)
    - Citation, plagiarism — 2h (CW)
    - Data protection — 1h (HB)

- **PRACTICAL ISSUES :**
  - Team : JP. Pernot, L. Roucoules, C. Wahnoun (Learning Center), Esma YAHIA
  - Scheduling : Should start after MP3 and before the PJR
  - Evaluation : Oral presentations (25%) + 1h exam at the end of the module (75%)

Professional modules

MP2 – Artificial Intelligence and data analytics

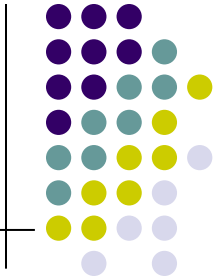

- **OBJECTIVES** :
  - To understand the machine learning concept and its applications
  - To learn how to set up and configure a Python based machine learning system

- **STRUCTURE** :
  - **P1: Concept of machine learning**
    - Introduction to machine learning 2h (AP)
    - First machine learning application in Python 4h (AP)
  - **P2: Neural networks**
    - Neural networks: theory and application 2h (AP)
    - Set up and implementation in Python 4h (AP)

- **PRACTICAL ISSUES :**
  - Team : A. Polette
  - Scheduling : Should start after MP3 and before PJR
  - Evaluation : Evaluation all along the module and through a project to be delivered

Professional modules

MP3 – Industry 4.0 : concept, survey and future trends

- **OBJECTIVES** :
  - To learn and manipulate the **characteristics, concepts and issues underpinning the fourth industrial revolution**
  - To analyse, synthetize and present **Industry 4.0 related notions by means of flipped classrooms**

- **STRUCTURE** :
  - **P3.1 : Concept of Industry 4.0**
    - Industry 4.0 pillars + introduction to flipped classroom — 1h (LR)
    - Exchanges on the first findings and coaching — 1h (LR/EY/KH)
  - **P3.2 : Flipped classroom**
    - Sequence 1 : Technologies and usages — 2h (LR/EY/KA/CW)
    - Sequence 2 : State-of-the-art and open issues — 2h (LR/EY/KA/CW)
    - Sequence 3 : Experimentation — 3h (LR/EY/KA/CW)
    - Sequence 4 : Final presentation — 3h (LR/EY/KA/CW)

- **PRACTICAL ISSUES :**
  - Team : L. Roucoules, E. Yahia, K. Amzil, C. White (English teacher)
  - Scheduling : To be scheduled at first to introduce the basic concepts
  - Evaluation : Oral presentations all along the module

Professional modules

MP4 – Digital factory and supply chain

- **OBJECTIVES** :
  - To **design a supply chain** to meet market demand
  - To **develop a global vision** to understand the relationship between planning, flow management and industrial and financial performance elements
  - To **model an information system integrating 4.0 technologies** and meeting the challenges of vertical, horizontal and end-to-end integration

- **STRUCTURE** :
  - **P4.1 : Supply chain management in a Make to Order strategy**
    - Configuration of physical and information flows — 1h (FR)
    - Different decision-making levels and vertical integration — 1h (FR)
    - Simulation (serious game) — 1h30 (FR)
    - Problem detection and resolution, continuous improvement process — 0,5h (FR)
  - **P4.2 : Supply chain management in an Assemble to Order strategy**
    - Value flow modeling and identification of improvement projects — 2h (FR)
    - Mass customization, delayed differentiation and Supply chain reconfiguration — 2h30 (FR)
    - Simulation (serious game) — 1h30 (FR)
    - Industrial performance evaluation and key management indicators — 1h (FR)
    - Structuring the Planning System ; horizontal and end to end integration — 1h (FR)

- **PRACTICAL ISSUES :**
  - Team : F. Rosin
  - Scheduling : 2 blocs (4h + 8h full day), should start after MP3 module
  - Evaluation : 45 min exam at the end of the module

Scientific modules

MS1 – Digital Mock-Up for CPS modeling and advanced engineering

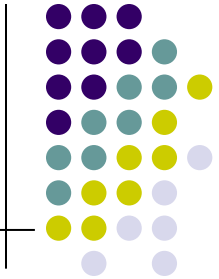

- **OBJECTIVES** :
  - To understand the **complexity and role of the Digital Mock-Up** (DMU) for the modelling and advanced engineering of CPS in the scope of Industry 4.0
  - To learn and train on the **various mechanisms used to generate and adapt complex DMU** to the different tasks all along the Product Development Process

- **STRUCTURE** :
  - **S1.1 : Advanced configured DMU**
    - Multi-representations and organisations of huge DMU — 2h (PV)
    - Product structuration and configuration management — 2h (PV)
    - 3D modelling strategies / methods and rules for CAD modelling — 2h (PV)
  - **S1.2 : Collaborative design** — 18h (PV)
    - Interface based driven design
    - Advanced CAD modelling techniques (design rules)
    - Application on the 3DEXPERIENCE platform

- **PRACTICAL ISSUES :**
  - Team : P. Véron
  - Scheduling : Should start before MS2
  - Evaluation : Evaluation all along the module and with a final deliverable

Scientific modules

MS2 – Reverse Engineering and digital prototyping of CPS

- **OBJECTIVES** :
  - To understand the needs and issues when developing **new approaches for the reverse engineering and rapid prototyping** of CPS in the scope of Industry 4.0
  - To learn and train on **state-of-the-art techniques for the reverse engineering and rapid prototyping** of CPS within the Product Development Process

- **STRUCTURE** :
  - **S2.1 : Reverse Engineering**
    - Reverse Engineering in the scope of Industry 4.0 — 1h (JPP)
    - Reverse Engineering techniques and current scientific issues — 3h (JPP)
  - **S2.2 : Rapid prototyping**
    - Rapid prototyping in the scope of Industry 4.0 — 1h (JPP)
    - Technologies and current scientific issues — 1h (JPP)
  - **S2.3 : Applications**
    - Reverse Engineering of complex assemblies in 3DEXPERIENCE — 12h (JPP)
    - Slicing algorithm for 3D printing with FDM (Fuse Deposition Modelling) — 4h (AP)
    - 3D printing of a part — 2h (AP/JPP)

- **PRACTICAL ISSUES :**
  - Team : JP. Pernot, A. Polette
  - Scheduling : Should start after the first 8h of MS1
  - Evaluation : Evaluation all along the module (several deliverables)

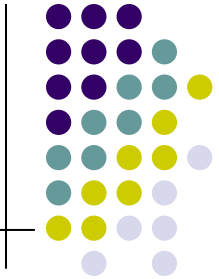

Scientific modules

MS3 – Continuity for CPS engineering in a heterogeneous context

- **OBJECTIVES** :
  - To understand the **evolution of engineering methods, models and IT systems** over the year and the **basics functions of engineering**
  - To learn some **concepts and techniques to support the digital and organisational continuity** in the current industries 4.0
- **STRUCTURE** :
  - **S3.1 : Interoperability in Engineering**
    - Engineering and heterogeneity context — 2h (LR)
    - Model Based Engineering — 4h (MK)
  - **S3.2 : Application (serious Use Case)**
    - Practical n°1 : System modelling (integrated and heterogeneous software) — 4h (LR)
    - Practical n°2 : MBSE training — 4h (MK)
    - Practical n°3 : Reinforcement learning for model transformation — 4h (QB)
    - Practical n°4 : Manufacturing BOM and system modelling — 4h (EY)
    - Phase “Debrief” vs “basics of eng.” and perf. (collab, change man., reuse, agility…) — 2h (LR/EY/MK/QB)
- **PRACTICAL ISSUES :**
  - Team : L. Roucoules, E. Yahia, Q. Brilhault, M. Kleiner
  - Scheduling : Should start after MP3
  - Evaluation : Exam + Practical work

Scientific modules

MS4 – Supervision of CPS during the engineering/exploitation phases

- **OBJECTIVES** :
  - Understand the needs and issues of the **supervision and monitoring of the processes, humans and the products** in the scope of **industry 4.0**
  - Define **smart monitoring and supervision systems** to facilitate decision-making.
  - **Develop competencies** in systems engineering, IIoT integration, data acquisition and analysis, and CPS design.
- **STRUCTURE** :
  - **S4.1 : Overview of the CPS supervision and monitoring issues**
    - Industry 4.0's contribution to systems supervision and decision support — 2h (EY)
    - Introduction to IIoT architectures — 2h (EY)
  - **S4.2 : Application : Project on monitoring system production and the I-NOVGAMES Challenge**
    - Project Kick-off and Expectations — 2h (EY)
      - Definition of system objectives and success criteria
      - Identification of critical monitoring points, sensors, and data sources
    - Project Requirements and Preparation Phase — 2h (EY)
      - Functional requirements for monitoring systems
      - System architecture design (hardware/software integration)
      - Data acquisition, IIoT connectivity, and dashboard setup
    - Project Work Sessions — 14h (EY & KA)
      - Implementation of monitoring prototypes
      - Real-time data collection, analysis, and visualization
      - Testing, validation, and iterative improvement
- **PRACTICAL ISSUES :**
  - Team : E.Yahia & Kenza Amzil
  - Scheduling : Should start after MS3 and overlap MP4
  - Evaluation : 1h exam + oral presentation

- **What is it?**

NOVGAMES is an innovation challenge organized by the Campus of Excellence Industry of the Future Sud through I-NOVMICRO, in collaboration with STMicroelectronics and EYCO. It brings together engineering school teams from the Provence-Alpes-Côte d'Azur region to design innovative solutions and build functional prototypes using ST microcontroller boards and electronic components.

- **Previous edition (#3, 2024):**
  - Theme: "Innovate for biodiversity by designing connected objects"
  - Winner: École des Mines de Saint-Étienne, Aix-Marseille Provence campus
  - Some projects were later showcased during a biodiversity day at STMicroelectronics Rousset (May 2024).

  (#4, 2025–2026):
  - Theme: Health, hospitals, and support for the elderly
  - Online launch : September 16 from 12:15 p.m. to 1:15 p.m.
  - Hackathon on October 23 from 9 a.m. to 6 p.m.
  - Final on January 29, 2026 from 10 a.m. to 6 p.m.
- **Next edition (#4, 2026–2027):**
  - Theme: Préparation des JOP 20230 et place de l'innovation
  - Online launch : September 15 from 12:15 p.m. to 1:15 p.m.
  - Hackathon on October 23 from 9 a.m. to 6 p.m. (design thinking and pitch)
  - Final on January 29 from 10 a.m. to 6 p.m.

Scientific modules

MS5 – Advanced robotics

- **OBJECTIVES** :
  - To learn and master the **concepts, models, methods and tools** related to robotics in the context of the Industry 4.0
  - To train on state-of-the-art techniques for advanced **modelling and control** of robotic cells, including **path generation**

- **STRUCTURE** :
  - **S5.1 : Modeling and control of robotic cells**
    - General introduction to robotic and Industry 4.0 — 3h (A. Olabi)
    - Modeling and control of robotic cells — 9h (A. Olabi)
  - **S5.2 : Control and generation of trajectories** — 4h (R. Béarée)
  - **S5.3 : Practical activities**
    - Project objectives and organization — 1h (Q. Brihault)
    - Prototyping — 7h (Q. Brihault)

- **PRACTICAL ISSUES :**
  - Team : A. Olabi, R. Béarée, Q. Brihault
  - Scheduling : November – December, requirement (if possible) : IA module
  - Evaluation : Evaluation all along the project

Scientific modules

MS6 – Mechatronics, advanced control, identification and fault-detection for CPS

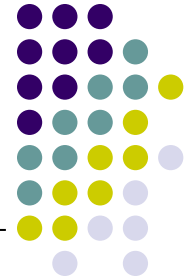

- **OBJECTIVES** :
  - To understand modern techniques for the control of **complex and/or non-linear systems**.
  - To learn and master/manipulate **IA concepts for monitoring, fault detection and diagnosis** in complex systems and processes.

  STRUCTURE :
  - **S6.1 : Mechatronics & advanced control (12h)**
    - Non-linear systems & applications — 3h (GM)
    - Sensors for optimized path planning, urban mobility — 3h (GM)
  - **S6.2 : IA and machine learning in monitoring, fault detection and diagnosis**
    - Data analysis for monitoring and fault detection in complex systems — 2h (AP)
    - IA project : use-case using Python IA environment on given data sets — 16h (AP)

- **PRACTICAL ISSUES :**
  - Team : G. Moraru (LISPEN), A. Polette (LISPEN)
  - Scheduling : December / Janvier, requirement : IA Module (MP2)
  - Evaluation : Evaluation all along the module + 1 exam

Long research project

PJR – 128h

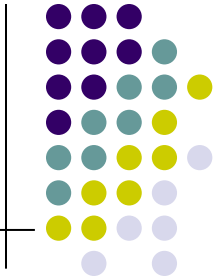

- **OBJECTIVES** :
  - To do a **first state-of-the-art analysis** on a specific subject
  - To learn and train on **advanced models, methods and tools** according to the specific project

- **STRUCTURE** :
  - **Project identification (~ mid-October)**
    - Meet the professors to exchange on their proposed projects
    - Return your wish list
  - **Project (128h)**
    - State-of-the-art with possible access to the library
    - Work on the project in the Bézier room or in another place specified by the Professors
  - **Final report and defence**
    - Synthetic report and presentation including a state-of-the-art on the specific subject
    - Dates to be defined mid-January 2024

- **PRACTICAL ISSUES :**
  - Team : E. Yahia, LISPEN team
  - Scheduling : From October to January (about 1 day/week)
  - Evaluation : Report and oral presentation

Language module

MLi – Advanced technical English or FLE

- **OBJECTIVES** :
  - To adapt your English skills (speaking & writing) to the field of CPSE
  - To clean up your basic language as necessary

- **STRUCTURE** :
  - **Debate club : debating skills and mental agility** 3h (C. White)
  - **Professional project : CV, interview practice, etc.** 5h (C. White)
  - **MP3 flipped class language support** 8h (C. White)
  - **Article writing and presentation of scientific results support** 7h (C. White)

- **PRACTICAL ISSUES :**
  - Team : C. White
  - Scheduling : Flipped class in parallel with MP3 module. Article writing and presentation before the final defence of the PJR in January.
  - Evaluation :
    - 40% - Flipped class
    - 30% - Professional project
    - 30% - PJR

Research internship

Semesters 1 & 2 (November ▶ January / February ▶ September)

- **OBJECTIVES** :
  - To learn and train on various **state-of-the-art high-level models, methods and tools** related to Industry 4.0 and CPS
  - To undertake a complete research project and **come up with a literature review and validated scientific contributions**

- **STRUCTURE** :
  - **Part 1 – Partial time (November ▶ January)**
    - Looking for an internship (in the lab or abroad)
    - Start working on the project
  - **Part 2 – Full time (February ▶ September)**
    - Full time working on the project
    - Formalizing, presenting and valorising the scientific contributions

- **PRACTICAL ISSUES :**
  - Team : E. Yahia, LISPEN team, external academic and/or industrial partners
  - Scheduling : From now on, you look for an internship, and from February to September (in the lab or abroad, covered by an internship agreement)
  - Evaluation : Report and oral presentation on both the literature review and scientific contributions, evaluation by the supervisor(s)

Safety rules

Fire instructions

- In the event of fire, keep calm and call 04 42 93 81 81.
  Don't be the first to hang up!
- If possible, attack the fire with suitable fire extinguishers.

- In case of smoke, bend down - the fresh air is close to the ground.

In case of evacuation...

- Move in an orderly fashion to the nearest emergency exit.
- Never go backwards!

- Do not use elevators.
- Do not collect personal belongings from the changing rooms
- Go to the assembly point located on the map on the back.

☞ *Locate evacuation routes as soon as you arrive!*

In the event of an accident...

Call a first-aider from the area and 04 42 93 81 81 specifying if possible :

- location
- the person's name
- circumstances of the accident

Our alarm

➢ **EVACUATION ALARME** :

Evacuate immediately.

In all cases, follow the instructions of your contact (department manager, Arts et Métiers staff, etc.).

Emergency number:
015 or 018 or 0112
In all cases:
04 42 93 81 81

Respecting our environment

Containers are available, so please sort your garbage (paper, cans, etc.).

We hope this guide has provided you with all the information you need to make the most of your visit. If you have any suggestions, please let us know:

Arts et Métiers Sciences et Technologies

Welcome to à Aix-en-Provence

Your safety depends on you...

Please take note of the safety plans for the area you are visiting, and follow the instructions given in this leaflet.

For on-site use only

Arts et Métiers campus

Safety rules

Guide for outsiders, visitors and newcomers to the Aix-en-Provence campus

This guide has been designed to help you enjoy your visit in complete safety. It is therefore important that you read it carefully. Do not hesitate to ask the person accompanying you any questions you may have.

General safety instructions

- The speed limit on the site is 20 km/h. Please observe the Highway Code.

- Smoking is strictly prohibited in all enclosed and covered areas.

- Respect the traffic lanes.
- Climb or descend stairs stairs by holding on to the handrail.

- Do not run in the the building, walk.

- Always use personal protective equipment whenever indicated. where indicated. This equipment will be provided by your supervisor.

- Respect the hygiene and safety rules explained by your guide.

If you are an outsider or visitor :

If you are an outsider or visitor :

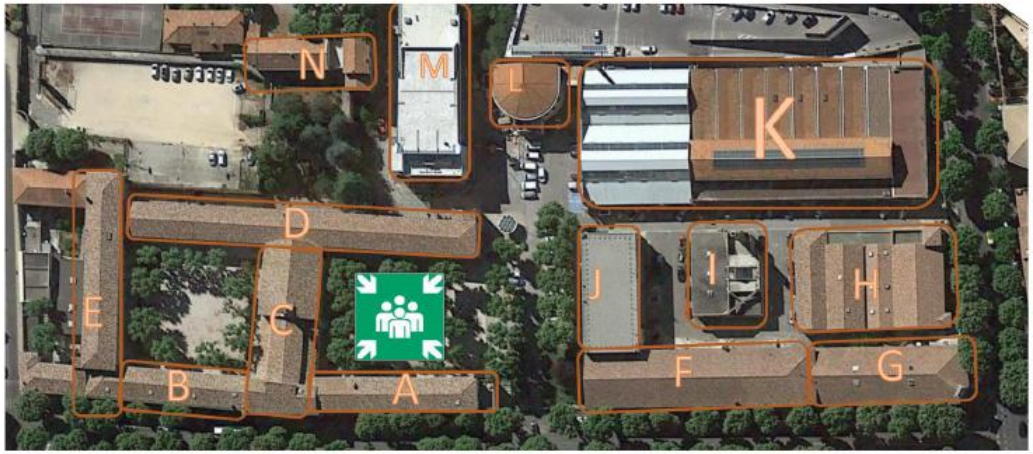

- You must check in at reception on arrival and sign the register on departure when you leave.
- You should always inform your Arts et Métiers contact of your visit, and ask a member of staff to accompany you if necessary.
- In some laboratories, depending on the instructions it is preferable to switch off your cell phone during certain periods of the day.

What to do in the event of abnormal operation…

PROTECT (the people)
